Address: Cairo, Egypt (Open to relocation and remote opportunities compatible with UTC+2 time zone)

Summary

Accomplished Flutter Developer with over 2 years of expertise in Flutter development using Dart. Skilled in designing efficient, scalable, and maintainable mobile solutions while fostering innovation, delivering measurable success in diverse projects. Focused on collaborating with organizations that prioritize professional development and work-life balance. Experienced in Graphic design

Experience

We Care

- Developed a cross-platform mobile application using Flutter & Dart.
- Implemented Clean Architecture and state management using Cubit (Bloc).
- Integrated Firebase for backend services (Authentication & Firestore).
- Built core features such as user authentication and data management

Mobile Apps developer (Flutter) at CodeBox.

August 2024 – July 2026

- Build scalable applications, while ensuring performance consistency.
- Refined user-focused design elements, driving ease of use and a positive user experience.
- Collaborated with a cross-functional team to develop and maintain Flutter applications for Android and iOS platforms.

Mobile Apps Developer (Flutter) – Internship at Intern Intelligence.

February 2024 – August 2024

- Participated in a hands-on Flutter training program focused on real-world app development for Android and iOS.
- Developed multiple UI screens following modern design principles and responsive layout techniques.
- Learned and applied clean code principles and reusable widget structures.
- Built a complete mini-projects as a final assessment, showcasing understanding of app architecture, routing, and local storage.

Technical Skills

Dart – Flutter Basics – oop – State Management(bloc) – Responsive & adaptive UI – RESTful API (Dio)– Clean Architecture (MVVM) – google maps – SharedPreferences – Firebase(Authentication & Firestore Database) – Published Flutter apps(Google Play & App Store).

General: Solid Principles – Design Patterns – Git – GitHub –Word –Excel –photoshop.

Education

Bachelor of Computer Science and Information Technology.

Mansoura University, Egypt.

Accumulative Grade: Good.

Graduation Project: Lung Cancer Prediction (Excellent)

Languages

- **English:** Intermediate
- **Arabic:** Native Proficiency

Projects

أثر&Athar

A cross-platform historical mobile application developed with Flutter, featuring Firebase Authentication and Firestore for user authentication and data management. The app provides multilingual support (Arabic & English) and allows users to explore historical figures, countries, battles, maps, and other historical content through a clean and intuitive UI.

Nourish Parent

A cross-platform educational and student management mobile application developed with Flutter, integrating Node.js, Socket.IO, Stripe, and Flutter Map. The app provides parents with features for monitoring student attendance, grades, exams, schedules, school meals, payments, notifications, and real-time bus tracking. Built using MVVM architecture and Cubit for scalable state management and a maintainable codebase.

We_care

A cross-platform mobile application developed with Flutter, designed to provide users with a simple and intuitive platform for accessing and managing healthcare-related services. The application features a clean and user-friendly interface with organized screens and smooth navigation, focusing on delivering an efficient and accessible user experience.

Link: https://github.com/abdallah-wafeeq/we_care

LungGuard

cross-platform mobile application developed using Flutter that aims to assist in the early detection of lung cancer. The app allows users to upload CT-scan images, which are analyzed by a backend server powered by a deep learning model (PyTorch) hosted via FastAPI.

E_Shoping App

A cross-platform mobile application built using Flutter, designed to simulate a modern online shopping experience. The app features product browsing, category filtering, detailed product pages, and a dynamic shopping cart. It follows clean architecture principles, includes state management, and showcases reusable UI components. The project demonstrates solid understanding of Flutter UI, navigation,
